

KIRAN KUMAR BHUKYA

Technical Lead, .Net Full Stack Developer

+91 9441853549

bhukyakirankumar12@gmail.com

42-471, Shirdi Hills, Hyderabad-37

SUMMARY

Experienced and results-driven .NET Full-Stack Developer with over 13 years of expertise in designing, developing, and delivering scalable, high-performance web applications. Demonstrated success in architecting robust solutions and leading projects from concept to deployment. Proficient in both front-end and back-end technologies, with a deep understanding of modern software development practices.

Known for strong problem-solving abilities, attention to detail, and a commitment to code quality and excellence. Adept at leveraging the latest tools and frameworks to meet business goals efficiently.

WORK EXPERIENCE

Camp Systems Pvt. Ltd.

Technical Lead

January 2021-Present

Senior Software Engineer

July 2015 - December 2020

Cognizant

Associate

August 2013-July 2015

Programing Analyst

April 2011 - July 2013

TECHNICAL SKILLS

Technical Architecture:

.NET Framework (2.0 to 4.8.1), .NET Core, ASP.NET MVC, WCF, Web API, ADO.NET, Entity Framework

Cloud & DevOps:

AWS, Docker, TeamCity, Octopus

Programming Languages &

Frameworks:

C#, VB 6.0, ASP, ASP.NET, LINQ, JavaScript, HTML

Client-Side Technologies:

Angular, Ext JS, JavaScript

Database Management Systems:

Microsoft SQL Server, Oracle, MongoDB

Third-Party Tools & Integrations:

Apache Kafka, NServiceBus, DevExpress Reports, Power BI, NHibernate

Design Patterns & Practices:

Factory, Singleton, Domain-Driven Design (DDD), Unit of Work

HIGHLIGHTS

End-to-End Development Expertise

Over 13 years of experience in building complete web applications – from designing the front-end and back-end to deploying on servers and maintaining them.

Architecture-Level Problem Solving

Work as a solution architect to design reliable, scalable systems. Solve complex problems and guide teams with best practices and code quality.

DevOps and Deployment

Good at setting up and managing tools like Octopus Deploy and TeamCity for automatic deployments. Handle server setup, configuration, and production releases smoothly.

Modernization of Front-End and Messaging Infrastructure

Upgraded Angular from v5 to v18 to improve front-end performance, security, and maintainability. Set up Apache Kafka using Docker to streamline distributed messaging, enabling faster development and easier local testing.

Using AI Tools for Faster Delivery

Make smart use of Cursor AI, GitHub Copilot, and ChatGPT to write better code faster, fix issues quickly, and stay updated with the latest technology trends.

Auth0 Setup and Security Management

Handled complete setup of Auth0, including configuring applications, setting up rules, roles, and permissions. Ensured smooth Single Sign-On (SSO) and secure access across different parts of the application.

Scrum Master and Agile Process

Lead the team as a Scrum Master by managing sprints, backlog, and meetings. Help the team stay on track and deliver high-quality work regularly.

Interviewing and Team Support

Take part in hiring by conducting technical interviews. Help team members grow through mentoring and code reviews.

Server and Infrastructure Knowledge

Set up and manage servers (IIS, Windows, SQL Server, Azure). Make sure everything runs smoothly and securely for production deployments.

Project and Team Management

Plan projects, manage risks, coordinate with stakeholders, and lead teams to deliver work on time and meet business goals.

EDUCATION

University of Hyderabad
M.Tech, Computer Science
2008-2010

Sreenidhi Institute of Technology
Electronics and Computer Engineering
2004-2008

LANGUAGES

- English
- Telugu
- Hindi

PEOPLE MANAGEMENT & LEADERSHIP

- Led teams of 4-10 people, making sure work was well coordinated, delivered on time, and met quality standards.
- Worked as a Scrum Master by handling sprint planning, daily stand-ups, and retrospectives, which helped the team stay organized and productive.
- Guided and supported team members through code reviews, technical help, and sharing best practices to improve their skills.
- Communicated with stakeholders and business users to understand requirements and keep projects aligned with business goals.
- Helped with hiring new team members, onboarding them quickly, and supporting their career growth within the team.
- Built a positive and collaborative team environment by solving conflicts, motivating team members, and recognizing good performance.
- Encouraged continuous learning, knowledge sharing, and teamwork to keep the team growing both technically and professionally.

PROJECTS

AMSTAT Premier | Role: Technical Lead, Scrum Master (March 2024 to Present) | Team Size: 6
Technology: ASP.NET, C#, Angular, Ext JS, Entity Framework, Web API, DevExpress, Kafka, .NET, Windows Service, MongoDB

Description:

A modern web-based platform developed for the aviation industry, offering advanced data analytics, custom reporting, and interactive dashboards to support asset-related decision-making.

This was a rewrite project from a legacy ASP-based system to a modern .NET + Angular architecture, significantly improving scalability, performance, and user experience.

CAMP IMS Mobile | Role: Technical Lead, Scrum Master (May 2017 to Present) | Team Size: 4
Technology: .NET Core, C#, Angular, Web API, Cordova, Oracle

Description:

A mobile extension of the CAMP IMS web platform, designed to provide real-time inventory management, shelf-life tracking, and compliance monitoring through mobile devices.

Developed using Angular and Cordova to enable mobile-first access for field operations and inventory teams.

CAMP Inventory Management System (IMS) | Role: Technical Lead, Scrum Master (July 2015 to Present) | Team Size: 6

Technology: C#, MVC, Ext JS, Angular, NHibernate, Web API, NServiceBus, Kafka, VB, DevExpress, .NET Framework, .NET Core, Windows Service, Oracle

Description:

A hosted, web-based inventory management solution supporting global, multi-location stockrooms. Features include tracking of shelf life, item value, location, purchasing, and receiving.

This was a rewrite project migrating from legacy VB to modern .NET and Angular, enhancing system performance, modularity, and maintainability.
